Ryland Liu

FullStack/Frontend Engineer

(+65) 91827282 · saintleso@gmail.com · www.linkedin.com/in/ryland-liu · github.com/L-Ryland

Passionate about **Web3**, **LLMs** (Large Language Models), data science, and emerging technology trends, and believes in the power of coding to change lives and drive business innovation.

TECHNICAL EXPERTISE

OS	Linux MacOS Windows
Frontend	React.js, TypeScript, Next.js, Vue.js, Vite
Backend	Python, Rust, Go, Node.js, API Design, Database Design (Postgres, MongoDB)
Soft Skills	Excellent communicaton and listening skills, Team collaboration

CERTIFICATES

Google UX Design Professional Certificate Nov 2024

Computer and Software Technology Qualification (Software Design Engineer) Nov 2021

RHCE/RHCSA **Server Operations** Jun 2021 - April 2027

ENTREPRISE EXPERIENCES

Gronova September 2024 - until now

Co-Founder

A startup company that bridges the gap between overseas fresh graduates and local businesses by providing precise job matching and addressing information asymmetry.

INTERNSHIP EXPERIENCES

Empact July 2024 - January 2025

Software Engineer

As a professional under supervision, I was responsible for implementing prototype designs, developing code, maintaining Python scripts, and providing various IT support services.

PROFESSIONAL EXPERIENCES

PacPort July 2022 - June 2024

Frontend Engineer

- Led platform architecture design, boosting UI load speed by 30% (measured via Lighthouse).
- Cut post-deployment issues by 40% by standardizing CI/CD pipelines (tracked via JIRA logs).
- Improved conversion rates by 15% through UI optimizations like lazy loading (A/B tested).
- Reduced API/database response times by 20% with caching and indexing (validated by New Relic).
- Built scalable backend services handling 500+ requests (99.95% uptime via load tests).

State Grid Corporation of China (SGCC) October 2019 - December 2021

Software Engineer

- Maintained internal systems with 99.99% uptime (highest in 5 years) by resolving hardware/software failures, tracked via Zabbix monitoring and incident logs.
- Reduced network downtime by 10% through traffic analysis and configuration tuning, measured by SolarWinds NPM and quarterly SLA reports.
- Automated 70% of routine tasks (e.g., system alerts, log cleanup) via Python/Bash scripts, saving 15+ hours/month (verified by task logs).

- Optimized SQL queries for critical databases, cutting report generation time by 35% (from 12s to 7.8s) benchmarked with Apache JMeter.
- Delivered 8+ backend modules (Python/Java) for management tools, improving data processing speed by 25% (validated by UAT feedback).

</> PROJECT EXPERIENCES

Offerlah Website (click to preview) September 2024 - Until now

This platform assists international students in gaining exposure and enhancing their prospects of securing their dream jobs.

As a member of the frontend team, I was responsible for implementing the website's design and architectural framework.

The application utilizes Next.js to enhance both SEO and server-side performance. By leveraging server-side rendering (SSR) and static site generation (SSG), we ensure better pre-rendered web pages to the clients, reducing page load times, and improve search engine crawlability, leading to better SEO outcomes. Additionally, Next.js offers built-in optimizations, such as automatic code splitting and image optimization, further boosting server-side efficiency and overall application performance.

Pabbit Desk (click to preview) November 2023 - June 2024

Designed and developed the website for managing properties and IoT devices.

Implemented React.js for seamless UI/UX, integrating backend data visualization and responsive design for mobile optimization.

Utilized AWS Cognito for authentication and worked on backend features using Go and Gin framework.

Ensured efficient data handling and seamless user interaction.

MC2 (click to preview) July 2022-Jan 2023

This project combined AI-driven image generation, quantitative trading, and real-time frontend performance optimization, demonstrating expertise in Vue 3, WebSockets, and real-time data processing.

Developed a dynamic rendering system using React.js and HTML5 Canvas to enable real-time visualization of AI-generated images. Optimized algorithms to efficiently process and display large-scale image data from LLM outputs. Built a Vue 3-based web interface with a custom UI framework, integrating WebSocket communication for real-time data exchange and using VueQuery for efficient state management.

Engineered a robust adapter layer to handle data flow between AI models and trading algorithms, ensuring smooth interaction between the visualization and trading components.

🎓 EDUCATIONAL BACKGROUND

2024.01 – 2025.01 **University of Suffolk** · Msc International Business and Management

Project Management: Experience in overseeing projects, setting timelines, and ensuring deliverables align with objectives.
Analytical Thinking: Ability to assess complex situations, identify problems, and devise effective solutions.
Cross-Cultural Communication: Proficiency in collaborating with diverse teams and understanding global perspectives, which is crucial in today's interconnected tech environment.
Adaptability: Comfort with navigating changing environments and learning new concepts quickly.
