Ryland Liu

FullStack/Frontend Engineer

(+65) 91827282 · saintleso@gmail.com · www.linkedin.com/in/ryland-liu · github.com/L-Ryland

Passionate about **Web3**, **LLMs** (Large Language Models), data science, and emerging technology trends, and believes in the power of coding to change lives and drive business innovation.

EDUCATIONAL BACKGROUND

2024.01 – 2025.01 **Uninversity of Suffolk** · Msc International Business and Management

Project Management: Experience in overseeing projects, setting timelines, and ensuring deliverables align with objectives.

Analytical Thinking: Ability to assess complex situations, identify problems, and devise effective solutions.

Cross-Cultural Communication: Proficiency in collaborating with diverse teams and understanding global perspectives, which is crucial in today's interconnected tech environment.

Adaptability: Comfort with navigating changing environments and learning new concepts quickly.

TECHNICAL EXPERTISE

OS	Linux MacOS Windows
Frontend	React.js, TypeScript, Next.js, Vue.js, Vite
Backend	Python, Rust, Go, Node.js, API Design, Database Design (Postgres, MongoDB)
Soft Skills	Excellent communicaton and listening skills, Team collaboration

CERTIFICATES

Google UX Design Professional Certificate Nov 2024

Computer and Software Technology Qualification (Software Design Engineer) Nov 2021

RHCE/RHCSA **Server Operations** Jun 2021 - April 2027

PROFESSIONAL EXPERIENCES

PacPort July 2022 - June 2024

Frontend Engineer

As a core frontend developer, led the architecture design and development of a high-traffic e-commerce platform, implementing key features and performance optimizations.

Collaborated with UI/UX, testing, and product teams to ensure design and product alignment, reducing post-deployment issues by 40% and ensuring on-time delivery.

Performance Optimization: Improved UI loading speed (30% reduction in page load time) through code splitting, lazy loading, and caching, boosting conversion rates by 15%.

API Optimization: Refactored REST APIs and optimized database queries, reducing response times by 20%.

Contributed to backend API design and optimization for efficient frontend-backend interaction. Developed partial backend services using Node.js and Express.js. Worked closely with backend teams to ensure data consistency and system performance.

State Grid Corporation of China (SGCC) October 2019 - December 2021

Software Engineer

I was responsible for the maintenance and optimization of the company's internal information systems, ensuring high availability and stability. Diagnosed and resolved hardware and software issues, maximizing system uptime and user experience.

Network Optimization: Analyzed network traffic and optimized network configurations, resolving connectivity issues and reducing system downtime and faults by 10%, improving overall system performance.

Automation Scripts: Developed multiple automation scripts for system monitoring and automatic issue resolution, reducing manual intervention and improving operational efficiency.

Participated in the development and maintenance of the company's internal management system, developing backend modules using Python and Java to support data processing and business logic. Optimized database queries using SQL, improving data processing efficiency. Collaborated with the frontend team to ensure system interface responsiveness and user experience.

</> PROJECT EXPERIENCES

Pabbit Desk & Pydio Website November 2023 - June 2024

Designed and developed the website for managing properties and IoT devices.

Implemented React.js for seamless UI/UX, integrating backend data visualization and responsive design for mobile optimization.

Utilized AWS Cognito for authentication and worked on backend features using Go and Gin framework.

Ensured efficient data handling and seamless user interaction.

MC2 July 2022-Jan 2023

This project combined AI-driven image generation, quantitative trading, and real-time frontend performance optimization, demonstrating expertise in Vue 3, WebSockets, and real-time data processing.

Developed a dynamic rendering system using React.js and HTML5 Canvas to enable real-time visualization of AI-generated images. Optimized algorithms to efficiently process and display large-scale image data from LLM outputs. Built a Vue 3-based web interface with a custom UI framework, integrating WebSocket communication for real-time data exchange and using VueQuery for efficient state management.

Engineered a robust adapter layer to handle data flow between AI models and trading algorithms, ensuring smooth interaction between the visualization and trading components.
